

Diatomix IV Instructions

Keeping your water free of weed and problem algae can be difficult – whether it is a garden pond or a large farm dam. But with Diatomix IV the solution is easy, safe and also very cost effective.

Just \$1.50 per week for an average garden pond!

Diatomix IV is highly concentrated, to ensure we keep our environmental footprint very small, using less packaging and less freight costs.

There are no harmful ingredients in Diatomix IV so it is safe to use and store, the only requirement is that you remember to give the bottle a really good shake prior to use.

How to Use & How Much?

Diatomix Pond

We recommend for small garden ponds (up to 10 square metres, for example 5 metres long and 2 metres wide) put 5mL – yes only 1 teaspoon of Diatomix, in your pond, three times a week. Before you begin dosing, you will need to add a small amount of Diatomite Fines to the pond as the food source for the Diatomix Pond.

Diatomix IV

If your pond, dam or lake is large (more than 30 square metres) refer to the chart below for the weekly dosage rates applied once per week.

To ensure better coverage in your pond it is best to mix the recommended dose of Diatomix IV in a container with water then throw it over your pond, avoid getting it on top of weeds as it needs to be in the pond water.

Remember that Diatomix is specially formulated mix of Silica and 10 vital nutrients for Diatoms to grow and replicate, so just like us they need regular nourishment to survive.

See the following video link for dosing instructions:
